Art Unit: 1648

Claims 1-38 are pending and subject to restriction as follows.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, 14, 16, and 32-36, drawn to DNA, DNA vaccines, methods of making DNA vaccines, and method of making protein, classified in class 536, subclass 23.72 and class 435, subclass 69.3, and in class 514, subclass 44, e.g.
- II. Claims 11-13, 15, and 17-20, drawn to peptides and method of immunizing, classified in class 530, subclass 350 and class 424, subclass 204.1.
- III. Claims 21-24, drawn to antibodies and treatment method, classified in class 424, subclass 147.1, e.g.
- IV. Claims 21-23 and 25-29, drawn to antibodies, kit and detection method, classified in class 435, subclass 5, e.g.
- V. Claims 30 and 31, drawn to kits and DNA methods, classified in class 435, subclass 6.
- VI. Claims 37 and 38, drawn to virus, classified in class 435, subclass 388.3.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process

(MPEP § 806.05(f)). In the instant case the product can be isolated from natural sources or made synthetically.

The products of Inventions I, II, III-IV, V, and VI are patentably distinct products having different physical, chemical, and biological properties and different functions.

The methods of Inventions I, II, III, IV, and V are distinct methods, each requiring different reagents and different process steps, and having different goals and outcomes.

Inventions VI and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product can be used in a different process such as in a hybridization or other nucleic acid-based assay.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because the search required for any one group is not coextensive with that required for any of the other groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 1648

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
